### DETAILED ACTION

1. Claims 1-4 and 6-13 are pending.

#### ***Allowable Subject Matter***

2. Claims 1-4 and 6-13 are allowed.

The following is an examiner's statement of reasons for allowance:

The present invention teaches a method for generating random numbers by creating a turbulent flow in a liquid crystal material and making measurements upon the turbulent flow. Each independent claim identifies the distinct feature of applying a potential difference across electrodes effective to produce turbulence in the liquid crystal material. The closest prior art, Yamada US Patent No. 5,294,256 teaches the placing of a potential across electrodes on a liquid crystal material and taking measurements upon the liquid crystal material; however, Yamada fails to teach the applying of a voltage to cause a turbulent flow and the making of measurements to produce a random sequence of numbers (see Applicant's arguments presented 11/8/2004, page 6). The prior art fails to teach generating random numbers by creating a turbulent flow in a liquid crystal material and making measurements upon the turbulent flow and thus fails to anticipate or render the above limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
